

Established for over 35 years, we have focused exclusively on providing unbeatable office technology, and although we are a truly national operation, our success has been forged around our unique network of local offices providing on-the-spot response, rapport and reliability.

Network Security

One of the most important areas for any modern day business is security.

Altodigital specialise in preventing any kind of system malfunction, employee misconduct or outside threats from causing a security breach. We have researched the market and work hard to select and implement the right anti-virus and anti-spyware programs, all scalable to the needs of your business

We also configure bespoke firewall protection to block threats, utilising real-time live security.

Spam based attacks and threats from hackers are evolving and becoming more sophisticated - it is important that businesses protect their users, data and assets - sooner rather than later!

Data Protection

In order to operate effectively your business will require and use confidential data and information relating to stakeholders. This information is passed across with the expectation that it will remain secure and only be used appropriately by your business when necessary.

Is your business taking the necessary steps to ensure this is the case, and the data in your possession is protected?

Cyber Attacks

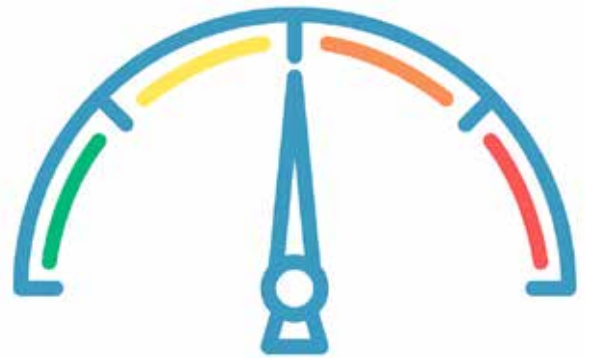

With vast amounts of sensitive data being stored electronically, it is more important than ever for your business to ensure it's network is secure.

Our network security packages are centred on protecting business networks from cyber threats, keeping sensitive data secure and eliminating the risk of embarrassing security breaches that can be harmful to a company's reputation.

Free Security Assessment

To help put your mind at ease, Altodigital offer a free security assessment. This assessment will be followed by recommendations that will highlight areas for improvement and where your business is in danger of having a security breach.

We can then work with you and give your business the protection it deserves.

IT Managed Services

Protect, support and optimise your IT infrastructure with our proven range of IT solutions. From network support, disaster recovery and business continuity plans, to print/printer security and virtualisation, we'll help your business to minimise downtime, achieve operational efficiencies and secure real cost savings.
