

Established for over 35 years, we have focused exclusively on providing unbeatable office technology, and although we are a truly national operation, our success has been forged around our unique network of local offices providing on-the-spot response, rapport and reliability.

Virtualisation

With virtualisation, not only can you consolidate network assets, storage resources and server infrastructures, you can also significantly reduce your risk and improve reliability.

You will no longer be reliant on hardware performance and your data will be constantly available to you and your team. It can transform the way your business runs your IT infrastructure and the efficiencies it enjoys.

With virtualisation various security benefits are gained. These include separating development from production workloads, allocating isolated resources for update testing and, in the case of desktop virtualisation, the ability to ensure that data does not leave your data centre.

Increased Efficiency

Without virtualisation, IT resources can be under-utilised and servers over-managed, and if your exchange email server or a core server fails, it could severely disrupt the productivity of your employees.

Ensuring business critical data is always available, even in the event of a failure to the physical server, is vitally important. Through virtualisation this data is stored on an external SAN and the virtual server will kick in with zero downtime to your business.

More Cost Effective

With virtualisation, you are able to use data centres to consolidate your server requirement to fewer, more powerful systems - enabling you to use resources more effectively. This also extends to space, power, port and cabling savings.

These supporting elements of infrastructure can be very expensive, especially with respect to network and storage ports hence there is potential for a substantial cost saving.

Smarter technology

Virtualisation maintains business continuity and disaster recovery should the unforeseen happen. With regular backups and reporting, data and applications will quickly be restored to their pre-disaster state.

Should disaster hit the data centre itself, virtual machines can be easily re-located elsewhere, avoiding any unnecessary downtime or disruption.

IT Managed Services

Protect, support and optimise your IT infrastructure with our proven range of IT solutions. From network support, disaster recovery and business continuity plans, to print/printer security and virtualisation, we'll help your business to minimise downtime, achieve operational efficiencies and secure real cost savings.

The Benefits

- Reduction in IT costs
- Servers are better utilised
- Improves carbon footprint
- Add and remove applications with ease
- Improve your service quality
