

Established for over 35 years, we have focused exclusively on providing unbeatable office technology, and although we are a truly national operation, our success has been forged around our unique network of local offices providing on-the-spot response, rapport and reliability.

## Wireless Networks

**As employees become increasingly agile, workspaces now need to be designed to deliver more versatile Internet coverage. It's no longer acceptable to just have a PC or groups of PCs wired to a router with ethernet cables.**

With fewer people now being desk-bound, and with the sales of portable devices like tablets increasing, it's important that all employees have instant, reliable access to your corporate network. Wireless networks enable multiple devices to share the internet connection remotely, as well as files and other resources.

Aside from efficiency savings, using a wireless service substantially cuts down on physical maintenance time and gets rid of all unsightly cables running through the office. It also makes it easier to add extra devices to the network, as no new cabling is needed.

### One platform

Through a single, secure wireless platform, employees can enjoy greater mobility without losing any connectivity as they roam. This leads to more cohesive and efficient working.

A wireless network can improve customer service by connecting staff to the information they need faster – wherever they are.

### Fast and cost effective

Businesses that need to add employees or reconfigure office spaces frequently will benefit from the flexibility wireless connectivity provides. Desks can be quickly re-located and new employees added to your network without the effort and cost associated with new cabling and wiring.

Typically a WLAN offers much better speeds and fewer delays in comparison to a traditional network setup. Combined with good connectivity, it provides a versatile and reliable solution for today's modern businesses.

### BYOD Management

With today's BYOD culture, it's estimated that there are now three times as many personal devices in your air space as those owned by your business.

This effectively means that there are many more unauthorised devices now logging onto your network, thus increasing the security risk, potential for data leakage etc.

Altodigital provides secure, purpose-designed BYOD WIFI solutions allowing secure access by user-owned devices without jeopardising the security of your network.

### IT Managed Services

Protect, support and optimise your IT infrastructure with our proven range of IT solutions. From network support, disaster recovery and business continuity plans, to print/printer security and virtualisation, we'll help your business to minimise downtime, achieve operational efficiencies and secure real cost savings.

### The Benefits

- Ability to set up separate WIFI areas
- Block unrecognised devices to keep your network secure
- Move staff and set up new users quickly and efficiently
- Improved speed and connectivity
- Keep BYOD culture under control
